BAU 2027 trade fair: dormakaba brings the future of access to life

Rümlang, 2 November 2026 – At BAU 2027 in Munich, the world's leading trade fair for the construction industry, dormakaba will present its latest innovations in Hall B1, Booth 319, under the motto "Secure Access. Enabling Life." At the same time, the access solutions specialist offers a practical glimpse into the future. A practical example demonstrates how robotics can be integrated into future access and door solutions.

At the BAU 2027 trade fair, dormakaba will use real-world examples to demonstrate how its broad product portfolio is being further developed. A key focus will be on communication between access solutions and robots – a growing market of the future. For example, cleaning robots are being used in an increasing number of facilities. To ensure that only authorized individuals can access secure indoor areas while enabling convenient and efficient building cleaning, dormakaba is developing and testing interface solutions in collaboration with its partners. At BAU 2027, the company will present initial use cases for the EasyAssist door assistant and report on the progress of its development.

In light of growing hybrid threats, perimeter security is becoming increasingly important. With its robust Kentaur turnstiles, dormakaba offers reliable protection for outdoor facilities. Combined with ID card readers, they enable efficient, automated access control. At BAU 2027, dormakaba will unveil the latest addition to the Kentaur range. Certified to Resistance Class 3 (RC3), it provides an even higher level of resistance than other models in the range.

"Together with our visitors, we'll explore dormakaba's latest product innovations and developments in the pipeline. Our approach to access is holistic, covering everything from outdoor areas to high-security applications. This allows us to offer our customers tailored access solutions that combine security and convenience. We look forward to engaging discussions at BAU 2027," says Torsten Stolte, SVP Market Germany & Netherlands at dormakaba.

Protecting Critical Infrastructure: Data Centers

As the use of AI continues to expand, companies worldwide are investing billions in new data centers. dormakaba offers a broad portfolio of solutions for this market. At BAU 2027, the company will present the IT rack handle lock 36 10, a new addition to its portfolio. It provides reliable access protection and can be adapted to different security requirements.

Urbanization is driving growing demand for solutions designed for multi-family residential buildings. At the same time, high energy costs are keeping demand for solutions that improve building sustainability high.

At BAU 2027, dormakaba will showcase its current portfolio, including the MotionIQ smart door system, which is now also available for sliding doors. Visitors can also explore a range of other solutions designed to meet the evolving needs of the building sector.
